Marshall V-LCD71MD 7 Inch Monitor at NAB 2014

April 16, 2014 Meg Featured, Gear News No comments

At NAB this year, **Marshall Electronics** showed off their new V-LCD71MD 7 Inch Monitor that is 1920x1080px for full high definition display!

Marshall V-LCD71MD 7 Inch Monitor at NAB 2014 from LensProToGo on Vimeo.

From the [lcdracks.com](#) website:

The V-LCD71MD-3G includes the base unit with a preinstalled MD-3GE module providing an additional 3G/HDMI/SD-SDI input with loop-through. The V-LCD71MD-O** version includes the base unit with a preinstalled MDO-3G module providing a 3G-SDI output converted from the HDMI input. Finally the V-LCD71MD base unit comes with no preinstalled module.

Building on the features that made the MD series famous, these models add even more user friendly features.

This 7" monitor offers a high brightness 700-nit, full resolution 1920 x 1080 LCD panel. Modules can be added at anytime in the field by you the user. Modular design allows you the user to determine what I/O combinations you want. 0-nit, full resolution 1920 x 1080 LCD Backlit panel and standard features including a wide variety of formats and markers, 4 user-config Icon driven Menu System, Waveform Display with dual Audio Bars, Front Panel Headphone output, Variable Pixel-to-Pixel function plus Marshall's industry leading PEAKING Filter now in four colors for easier

Poll

What do you think of Adobe Creative Cloud?

- Love it!
- Hate it!
- Not sure it's for me...
- The new Photoshop Photography Program looks promising...
