DPI Touts INSIGHT LASER 4K, FlexFleet Rental Program

BOOTH N647 Digital Projection International (DPI) is presenting 4K applications with an impressive combination of solid-state laser illumination and 4K native resolution, courtesy of the INSIGHT LASER 4K projector. With 20,000 hours of illumination life and no lamp replacements required, the Insight Laser 4K delivers bright, stable and color-accurate imagery with remarkably low lifetime cost of ownership—all with the stunning detail and image subtlety that only full 4K resolution can deliver, and all at approximately 40 percent of the size and weight of existing 4K projector solutions.

DPI's 12,000-lumen INSIGHT LASER 4K will begin shipping in late 2014.

DPI's INSIGHT LASER 4K projector

In other DPI news, the company is teaming with OSA International, a leading AV solutions provider for live events and entertainment, in the FlexFleet Rental Program, which is designed to provide professional staggers a competitive option for renting high-performance projectors.

The FlexFleet Rental Program provides professional staggers the option of renting the most current high performance, 3-chip, 20K lumen, TITAN Quad 3D projectors, as well as the 110 V powered, 15K lumen TITAN 930-3D projectors. This rental fleet is fully equipped with DPI's staging-oriented RapidRig projector rigging system, and a wide selection of lenses sourced directly from the manufacturer.

MXL MICROPHONES, BOOTH 11325 MXL is introducing broadcast-style, multi-camera production to enterprise web conferencing. The MXL Teleconferencing solution combines Marshall HD miniature cameras, a seamless camera switcher, web conferencing microphones and new HDSI-to-USB3 converters into one comprehensive AV solution. This meeting production package is designed to work with Microsoft Lync, Go To Meeting, Blue Jeans, Google Hangout and other web conferencing services. MXL Teleconferencing includes up to four CV500-MB mini cameras connected to a four-camera switcher. The switcher sends the HD signals through an HDSI-to-USB3 converter to the computer. The cameras operate in multiple resolutions and frame rates. MXL's Devan Cross proved himself an enthusiastic advocate of the teleconferencing solution while holding forth at the company's booth yesterday.
