Marshall 7inch V-LCD70XP-HDMIPT

February 6, 2011 — [Leave a comment](#)

When it comes to monitoring there are a heck load of options; anything from a 2x magnification eye piece with or without diopter to an electronic view finder to a separate LCD screen with unbelievable options. I went to the lower end of the scale – a view finder without a diopter. Personally I like the stability the direct view finder to camera LCD gives, but in terms of features it does not come close to Zacuto's Z-Finder EVF or this new Marshall 7" V-LCD70XP-HDMIPT.

There are of course cheaper options like the Lilliput, but like the old cliché goes; you get what you pay for – not that Lilliput is bad, it just does not have all the stuff you may want.

Here is a Field monitor that has a lot of features. Something for the wish list.

The first thing that stood out for me was the **loop through output**, so goes that mean I can use a Z-Finder EVF and the Marshall V-LCD70XP-HDMIPT at the same time? Sure looks like it.

Otherwise:

- High resolution 800 x 480 LCD panel
- DSLR Ratio Adjustment
- HDMI Auto Color Space and Ratio detect
- Manual Gamma Adjustment
- Adjustable Backlight
- Image Flip
- 1/4"-20 mounts on all sides
- Robust Power switch and rugged front panel
- Variety of Markers, including user-adjustable • HDMI Loop-Through*
- False Color On/Off
- Peaking Filter On/Off
- RGB Check Field / Field Detect
- 15:9, 16:9, 4:3, Pixel-to-Pixel modes
- 4 user-configurable function buttons
- Scratch Resistant Protective Screen
- RGB gain and bias control
- Variety of User-Replaceable Battery Adapters available

very cool.
