## Marshall Electronics Releases Two Wireless HDMI Monitor Systems

*Marshall's wireless systems work with virtually any HDMI monitor to allow camera operators total freedom of movement while the director views the action on a stationary monitor.*

El Segundo, CA (February 24, 2014) - Marshall Electronics' new Professional Wireless Video Production Systems offer new cutting-edge video technology for remote video monitoring. Two transmitter options are available, either a camera-powered stick transmitter or an AC/DC powered brick transmitter. The receivers are battery-powered, wireless and can be worn on a belt.

With the Professional Wireless Video Production Systems, uncompressed video and audio are transmitted wirelessly with less than a 1 millisecond delay. The director can view video feed in nearly real time from a stationary location on the set. The videographer is free to move about to capture the desired shots.

The available systems are:

**WP-1X** includes the V-MHT-B battery powered brick transmitter and a receiver. This power unitized transmitter can rest on a table top, mount to camera shoes and studs or can operate as a belt pack. The V-WHT-B transmitter and V-WHR receiver are designed to use the Marshall universal battery adapter plate. This allows each system to be conveniently configured to use the same batteries that the camcorder or DSLR use.

**WP-2X** includes V-WHT-A stick transmitter and a receiver. The camera powered V-WHT-A "stick" transmitter connects directly to the camcorder HDMI port and can also be cabled to any convenient mounting point on your rig as needed.

Three receiver options are available: V-VMR V-Mount Battery Receiver, V-ABR Anton-Bauer Battery Receiver, and V-WHR Stand Alone WHDI Receiver. In addition, Marshall has developed a battery plate that can accommodate Canon LPE6, Nikon EL3, Sony NPF970, and Panasonic VBG6 batteries.

Each transmitter has an HDMI 1.3 interface, up to a 30-meter range and supports video resolutions up to 1080p60. The systems offer excellent through-wall performance.

---

Battery powered transmitters and receivers can be easily configured to operate with snap-on camera battery mounts supporting many brands.

The Marshall Professional Wireless Video Production Systems are available now. The systems will be on display at NAB booth # C6019.

## **About Marshall Electronics**

Marshall Electronics Inc. is a privately owned American company with four distinct operating units: Professional Audio, Cable/Connector, Optical Systems, and Broadcast/Multimedia Division. Marshall specializes in the development, manufacturing and distribution of high tech electronic products used in a wide range of professional applications. The Broadcast Division of Marshall Electronics supplies high quality LCD monitors, IP security cameras and servers, distribution, and conversion solutions for broadcasters around the world. Visit [www.lcdracks.com](http://www.lcdracks.com) for Marshall's full line of Broadcast products.
