over HD-SDI. Aimed at broadcast applications, the CV500-MB outputs 1080i/59.94, but other versions of the CV500-M deliver 1080p/60 (over 3G-SDI), 1080p/30, 720p/60, and 1080i/60.

All camera versions can switch between PAL and NTSC (meaning 60 becomes 50 and 30 becomes 25) and can support a second simultaneous video stream over BNC output.

"The CV500-MB is capable of capturing difficult and compelling shots by going where other cameras can't go," said Marshall Electronics CEO Leonard Marshall in a prepared statement. "With the prevalence of reality and documentary television, a tiny camera with these capabilities is invaluable."
